DETAILED ACTION

The following is Examiner's response to Applicant's Appeal Brief received 22 September 2010 stemming from Appeal Brief meeting dated 12/30/2010.

Claim Rejections - 35 USC § 102

Claims 1-5 and 8-19 are rejected under 35 U.S.C. 102 (b) as being unpatentable over Dawson (US PGP 2002/0042765 A1 – herein referred to as Dawson).

First, Applicant appears to argue cited paragraphs as not teaching/suggested by the prior art of record [see Applicant Response, pages 7-9].

Next, Applicant incorporates subject matter indicated as potentially allowable in Arguments/Remarks [see Applicant's Response, pages 7-9]

In sum, Examiner withdraws his §102 rejections in the Office Action of 06/25/2010 in view of reasons for Allowance that follow.

Claim Rejections - 35 USC § 103

Claims 6 and 7 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Dawson (US PGP 2002/0042765 A1 – herein referred to as Dawson) in view of Jameson (US PGP 2004/0103013 A1 - herein referred to as Jameson).

First, Applicant appears to argue cited paragraphs as not satisfying the deficiencies of the prior art of record [see Applicant Response, pages 7-9].

Next, Applicant incorporates subject matter indicated as potentially allowable in Arguments/Remarks [see Applicant's Response, pages 7-9]

In sum, Examiner withdraws his §103 rejections in the Office Action of 06/25/2010 in view of reasons for Allowance that follow.

Allowable Subject Matter

Claims 1-19 are allowable.

Reasons for Allowance

The following is Examiner's statement of reasons for allowance:

With respect to Applicant's independent claims 1, 5, 9, 12, 14 and 17 the most relevant reference made of record is Dawson [2002/0042765 A1].

Dawson teaches a manually-assisted computer and communications apparatus is provided for periodically fixing a price of a currency or commodity. One aspect of the present invention involves organizing auction data. Sub-samples comprise bid data associated with auctions having common number of bidders. An inverse bid function is applied to at least two sub-samples, pooling results from applying the inverse bid function to form a first pool. A direct bid function is applied to the first pool to generate a sample bid. A forecast can then be made based on the bidders' behavior.

Overall, Dawson fails to teach a system and method for analyzing auction data having varying number of bidders. There is no instruction that forms previously acquired data into a plurality of sub-samples, each sub-sample comprising bid data associated with auctions having a common number of bidders, the number of bidders varying among the sub-samples. There is also no applying, by the processor, a direct bid function on the first pool to generate sample bids. There is no instruction that applies a direct bid function to the initial psuedo values to calculate sample bids associated with a second sub-sample that is the next largest sub-sample, in terms of number of bidders, after the first sub-sample. There is no instruction that combines the first and second psuedo values together to produce combined auction values.

Art Unit: 3695

Further searches revealed no references that disclose the invention as claimed nor were any further references identified which could be reasonably combined with the cited art of record to meet the allowable feature discussed above.

In sum, Claims 1, 5, 9, 12, 14 and 17 are deemed allowable over the prior art of record and Claims 2-4, 6-8, 10-11, 13, 15-16 and 18-19 are allowable by virtue of their dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
